

Historical Regulated Natural Gas Rates for Dominion East Ohio

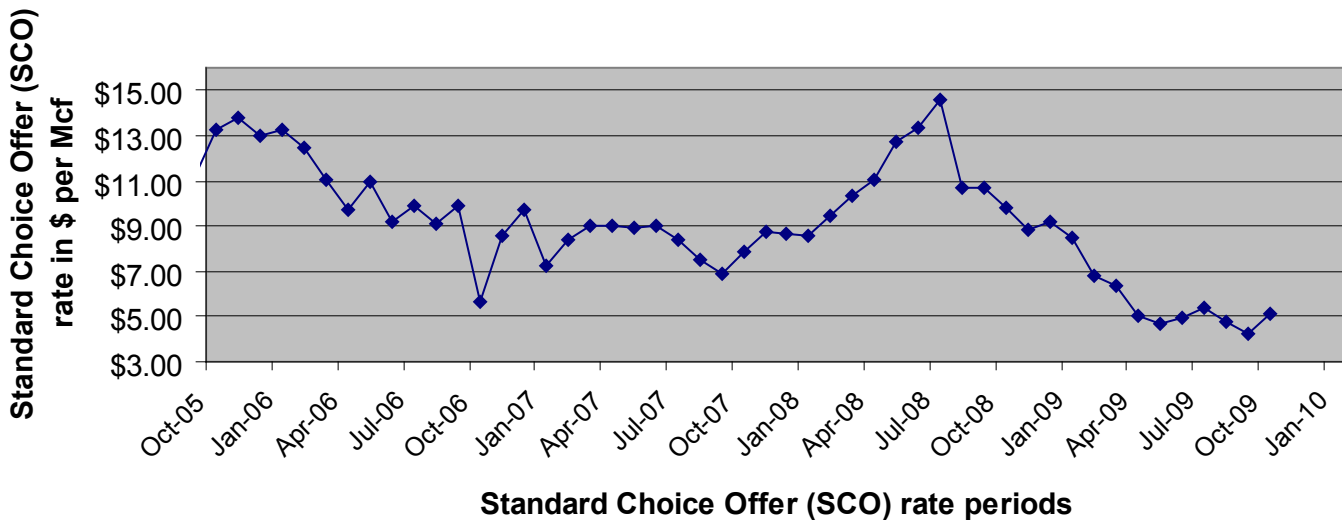

Updated November 2009 • This publication is updated monthly.

This chart was created to provide Dominion East Ohio customers information about the company's natural gas rates.

Standard Choice Offer (SCO) – In April 2009, Dominion changed the way it determined its natural gas prices. There are two factors that determine the Standard Choice Offer. First, a portion of the rate depends on the current price of natural gas as reported on the New York Mercantile Exchange (NYMEX). Based on the current market price for natural gas, this is the largest portion of the total charge. Second, an additional charge, the \$1.40 that resulted from the auction, is added to the NYMEX rate. When combined, the two factors set the SCO rate that appears on customers' monthly bills. The adder was set by the auction and stays the same for 23 months. However, the SCO changes monthly due to fluctuations on the NYMEX.

The Standard Service Offer (SSO) and the Gas Cost Recovery Rate (GCR) were the rates used previously. The SSO was determined similarly to the current SCO. The GCR was determined by the price utility companies paid for natural gas and the price for moving that natural gas from where it was purchased.

On the chart below, the rates listed for April 2009 and going forward reflect the SCO; rates from November 2006 through March 2009 reflect the SSO; and rates listed September 2006 and prior are reflective of the GCR.
